

Atlas Industries — IT Incident Response Plan

Document ID: IT-IR-005 **Owner:** IT Security **Last Updated:** 10 March 2025 **Version:** 4.1
Classification: Internal

1. Purpose

This plan defines how Atlas Industries detects, classifies, contains, and recovers from IT security incidents. It is mandatory reading for all engineers, IT operations staff, and managers.

2. What Counts as an Incident

An incident is any event that **could** compromise the confidentiality, integrity, or availability of Atlas Industries' systems or data. Examples:

- A confirmed or suspected phishing email that was clicked on.
- Unusual sign-ins from unfamiliar locations.
- Malware alerts from the endpoint protection agent.
- Lost or stolen company laptop or phone.
- Unauthorized access to internal repositories or shared drives.

If you are unsure whether something is an incident, **report it anyway**.

3. How to Report

- **Email:** security@atlas-industries.com — monitored 24/7 and routed to the on-call analyst.
- **Phone (urgent):** extension **3900** internally, or +20 2 1234 5900 externally.
- **Teams:** #security-incidents channel — for low-urgency events only.

Include the time, what you saw, what you clicked on or did, and whether the system is still accessible.

4. Severity Levels

Level	Description	Response Time
P1 — Critical	Active data exfiltration, ransomware, customer data exposure.	15 minutes
P2 — High	Unauthorized internal access, suspected account compromise, lost device with sensitive data.	1 hour
P3 — Medium	Single-user phishing click, unusual login alert, malware	4 hours

Level	Description	Response Time
P4 — Low	contained by endpoint. Policy violation without immediate impact, suspicious email reported but not interacted with.	Next business day

5. Response Phases

5.1 Detection & Triage

On-call analyst confirms the incident, assigns the severity, and creates an incident channel in Teams.

5.2 Containment

- Isolate the affected user or device from the network.
- Force password reset and MFA re-enrollment.
- Snapshot logs from affected systems before any cleanup.

5.3 Eradication

Remove the malicious component (delete malware, revoke credentials, block IPs, kill rogue sessions).

5.4 Recovery

Restore from clean backups when needed. Confirm with the user before returning the device to service.

5.5 Post-incident review

- P1 and P2 incidents: written post-mortem within 5 business days, shared with IT Security leadership.
- P3 and P4 incidents: summary entry in the monthly security report.

6. Roles

Role	Responsibility
Incident Commander	Coordinates the response, makes containment decisions.
Communications Lead	Drafts updates for management and (if needed) for customers.
Forensics Analyst	Captures and preserves evidence.
Affected User	Cooperates fully; does not attempt independent remediation.

7. External Communications

- All external communications (customers, regulators, press) are coordinated through the Communications Lead and Legal.
- Individual employees do **not** speak about incidents outside Atlas Industries.

8. Drills

IT Security runs tabletop exercises **twice per year** with engineering and operations leadership. Participation is mandatory for the listed roles.
